DETAILED ACTION

The amendment filed on 18 November 2004 have been received and entered. Claims 9,
 36 and 60 have been cancelled by the applicants and are therefore withdrawn from consideration. Claims 1-8, 10-16, 18-35 and 37-59 as amended are pending in the application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8, 10-16, 20-35, 39-47 and 50-59 are rejected under 35 U.S.C. 102(b) as being anticipated by Gill et al. U.S. Patent 6,081,262.

Referring to claims 1, 30 and 42, Gill et al. teach a method, system and machine readable medium having instructions comprising processing a request to create a scene capable of translational and rotational manipulation (using a multi-media authoring tool extension to create a multimedia presentation, the presentation capable of translational and rotational manipulation of its media objects via capabilities of zooming, rotating, resizing, etc. the objects) (column 3, lines 10-45, column 6, lines 49-50 and column 7, lines 1-62), processing a request to add at least two media objects to the scene (combining a plurality of media objects of multiple diverse types into an integrated presentation) (column 3, lines 10-15 and 56-62), preparing a translation vector and a rotation matrix for each of the media objects to define an orientation and a location of each

of the media objects in the scene (regulating the spatial relationship between the objects within the presentation by coordinating and managing the inputting of data into the plurality of partitions on the presentation; each object placed on the presentation has both a position and extent on the page; the user can further define the orientation and location of the imported objects by zooming, rotating, resizing, etc. the objects) (column 3, lines 21-45, column 6, lines 49-50 and column 7, lines 33-48) and displaying the scene (viewing the multimedia presentation) (column 14, lines 18-19 and column 18, lines 17-26). This is further shown in Figure 2 where a plurality of media objects are placed at certain locations on the presentation.

Referring to claims 23 and 53, Gill et al. teach a method and machine readable medium having instructions comprising providing a first function to allow an application program to create a scene capable of translational and rotational manipulation (using a multi-media authoring tool extension to create a multimedia presentation, the presentation capable of translational and rotational manipulation of its media objects via capabilities of zooming, rotating, resizing, etc. the objects) (column 3, lines 10-45, column 6, lines 49-50 and column 7, lines 1-62), providing a second function to allow the application program to add at least two media objects to the scene (combining a plurality of media objects of multiple diverse types into an integrated presentation) (column 3, lines 10-15 and 56-62), and preparing a translation vector and a rotation matrix for each of the media objects to define an orientation and a location of each of the media objects in the scene upon receipt of a request to execute the second function (regulating the spatial relationship between the objects within the presentation by coordinating and managing the inputting of data into the plurality of partitions on the presentation; each object placed on the presentation has both a position and extent on the page; the user can further define

the orientation and location of the imported objects by zooming, rotating, resizing, etc. the objects) (column 3, lines 21-45, column 7, lines 33-48 and column 6, lines 49-50). This is further shown in Figure 2 where a plurality of media objects are placed at certain locations on the presentation.

Page 4

Referring to claims 24 and 54, Gill et al. teach providing a third function to display the scene and the media objects in the scene and displaying the scene responsive to receiving a request to execute the third function (user activation of the presentation mode to the view multimedia presentation) (column 14, lines 18-19, column 18, lines 17-26 and Figure 5).

Referring to claims 2, 25, 31, 43 and 55, Gill et al. teach receiving a request to manipulate the scene (allowing the user to edit, manage and manipulate the objects on the multimedia presentation) (column 3, lines 37-44, column 4, lines 35-44 and column 10, lines 64-67).

Referring to claims 3, 26, 32, 44 and 56, Gill et al. teach updating the translation vector and rotation matrix for each of the media objects responsive to receiving the request to manipulate the scene (as each one of the plurality of media objects are added to the presentation, the presentation is updated to regulate the spatial relationships among the plurality of objects and reflect the new addition) (column 3, lines 21-44).

Referring to claim 4, Gill et al. teach the request to manipulate is received from an application program (using the authoring tool to manage and manipulate the presentation) (column 10, lines 64-67 and column 13, lines 63-67).

Referring to claim 5, Gill et al. teach the request to manipulate originates from the user (the user is using the authoring tool to manage and manipulate the presentation) (column 5, lines 36-44 and column 6, lines 57-59).

Referring to claims 6, 27, 33, 45 and 57, Gill et al. teach the request to manipulate is one of a pan request, a zoom request, and a tilt request (allowing the user to perform operations on the objects within the presentation such as zoom, rotate, etc.) (column 6, lines 49-63).

Referring to claims 7, 28, 34, 46 and 58, Gill et al. teach calling one or more library functions of a plurality of library functions to manipulate the media objects (using one of the tools, or functions of the authoring tool, such as zoom, rotate, resize, etc. to manipulate the objects; for example, creating a button object using the function of the button library pixel editor) (column 6, lines 49-63 and column 11, lines 44-47).

Referring to claims 8, 29, 35, 47 and 59, Gill et al. teach the library functions are included in a well-known operating system enhancement application program interface (the functions used to manipulate the objects are part of the authoring tool) (column 10, lines 64-67 and continuing onto column 11, lines 1-47).

Referring to claim 10, Gill et al. teach receiving a selection of a first media object of the media objects within the scene (selecting the media objects to rotate, resize, zoom, etc.) (column 6, lines 49-63 and column 11, lines 4-6).

Referring to claim 11, Gill et al. teach receiving a request to manipulate the first media object (allowing the user to edit, manage and manipulate the objects on the multimedia presentation) (column 3, lines 37-44, column 4, lines 35-44 and column 10, lines 64-67).

Referring to claim 12, Gill et al. teach updating the translation vector and rotation matrix for each of the media objects responsive to receiving the request to manipulate the first media object (as each one of the plurality of media objects are added to the presentation, the presentation is updated to regulate the spatial relationships among the plurality of objects and reflect the new addition; furthermore, the user can define the position and extent of each object on the presentation) (column 3, lines 21-44 and column 7, lines 33-37).

Referring to claim 13, Gill et al. teach the request to manipulate originates from the user (the user is using the authoring tool to manage and manipulate the presentation) (column 5, lines 36-44 and column 6, lines 57-59).

Referring to claim 14, Gill et al. teach the request to manipulate is one of a pan request, a zoom request, and a tilt request (allowing the user to perform operations on the objects within the presentation such as zoom, rotate, etc.) (column 6, lines 49-63).

Referring to claim 15, Gill et al. teach calling one or more library functions of a plurality of library functions to manipulate the media objects (using one of the tools, or functions of the authoring tool, such as zoom, rotate, resize, etc. to manipulate the objects; for example, creating a button object using the function of the button library pixel editor) (column 6, lines 49-63 and column 11, lines 44-47).

Referring to claim 16, Gill et al. teach the library functions are included in a well-known operating system enhancement application program interface (the functions used to manipulate the objects are part of the authoring tool) (column 10, lines 64-67 and continuing onto column 11, lines 1-47).

Referring to claim 17, Gill et al. teach the well-known operating system enhancement application program interface is the QuickTime® system available from Apple Computer, inc. (column 14, lines 1-10).

Referring to claims 20, 39 and 50, Gill et al. teach receiving a designation of a soundtrack to be played in conjunction with displaying the scene (including audio, or sound objects such as part of a movie, in the multimedia presentation) (column 1, lines 25-27, column 3, lines 56-65 and column 10, lines 11-21).

Referring to claims 21, 40 and 51, Gill et al. teach the soundtrack is played by calling one or more library functions of a plurality of library functions (the functions of the authoring tool includes merging objects including movies, audio, etc.) (column 3, lines 56-65).

Referring to claims 22, 41 and 52, Gill et al. teach calling one or more library functions of a plurality of library functions to display the media objects (the authoring tool includes functions allowing it to integrate and display media objects) (column 3, lines 56-65, column 4, lines 35-44 and Figures 2-3).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 18-19, 37-38 and 48-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gill et al. U.S. Patent 6,081,262, as applied to claims 1, 30 and 42 above, and further in view of Autry et al. U.S. Patent 5,724,106.

Referring to claims 18, 37 and 48, Gill et al. teach all of the limitations as applied to claims 1, 30 and 42 above. Specifically, Gill et al. teach associating sounds with media objects (including audio, or sound objects such as part of a movie, in the multimedia presentation) (Gill et al.: column 1, lines 25-27, column 3, lines 56-65 and column 10, lines 11-21). However, Gill et al. fail to explicitly teach playing the soundtrack associated with the media object when a user selects the media object. Autry et al. teach a graphical user interface for displaying and controlling media objects such as pictures (Autry et al.: column 3, lines 40-44 and column 4, lines 9-11) similar to that of Gill et al. In addition, Autry et al. further teach playing the soundtrack associated with the media object when the media object is selected by a user (playing a soundtrack when the user selects the icon by dragging and dropping the icon on a corresponding program) (Autry et al.: column 16, lines 54-67 through column 17, lines 1-4). It would have been obvious to one of ordinary skill in the art, having the teachings of Gill et al. and Autry et al. before him at the time the invention was made, to modify the interface for creating multimedia presentations of Gill et al. to include playing a soundtrack in response to user selection, taught by Autry et al. One would have been motivated to make such a combination in order to provide users with more options and control in designating how their created presentation will look and sound.

Referring to claims 19, 38 and 49, Gill et al. teach all of the limitations as applied to claims 1, 30 and 42 above. However, Gill et al. fail to explicitly teach the soundtrack is to be

played responsively to movement of the associated media object. Autry et al. teach a graphical user interface for displaying and controlling media objects such as pictures (Autry et al.: column 3, lines 40-44 and column 4, lines 9-11) similar to that of Gill et al. In addition, Autry et al. further teach the soundtrack is to be played responsively to movement of the associated media object (playing a soundtrack when the user selects the icon by dragging and dropping the icon on a corresponding program) (Autry et al.: column 16, lines 54-67 through column 17, lines 1-4). It would have been obvious to one of ordinary skill in the art, having the teachings of Gill et al. and Autry et al. before him at the time the invention was made, to modify the interface for creating multimedia presentations of Gill et al. to include playing a soundtrack in response to user selection, taught by Autry et al. One would have been motivated to make such a combination in order to provide users with more options and control in designating how their created presentation will look and sound:

Response to Arguments

- 4. Applicant's arguments filed 18 November 2004 have been fully considered but they are not persuasive.
- 5. With regard to claims 1, 23, 30, 42 and 53, the applicants assert that Gill does not disclose a scene capable of translational and rotational manipulation. The examiner respectfully disagrees. The amended claim languages of claims 1, 23, 30, 42 and 53 recite the limitation of "processing a request to create a scene capable of translational and rotational manipulation".

 The limitation does not specifically disclose that the scene itself needs to be able to be translated

Application/Control Number: 10/022,151 Page 10

Art Unit: 2173

and rotated, but merely that the scene, including its media objects, is capable of translational and rotational manipulation. Gill teaches the created scenes or presentations include media objects (column 3, lines 10-15). In addition, Gill further teaches the media objects included in the presentation have the capability to be translated and manipulated via zooming, rotating, resizing, relocating, etc. the objects (column 3, lines 21-45, column 6, lines 49-50 and column 7, lines 33-48). Therefore, since the multimedia presentation, or scene created includes media objects and the media objects are capable of translational and rotational manipulation, as a result, the presentation is also capable of translational and rotational manipulation capabilities.

- 6. With regards to claims 18-19, 37-38 and 48-49, the applicants assert that Gill does not teach or suggested the limitation of independent claims 1, 30 and 42, from which claims 18-19, 37-38 and 48-49 depend, specifically that Gill does not teach "processing a request to create a scene capable of translational and rotational manipulation" and that Autry does not teach the limitations missing in Gill. The examiner respectfully disagrees. In view of the response to claims 1, 23, 30, 42 and 53 above, the examiner maintains that Gill does teach the recited limitations of independent claims 1, 30 and 42, from which claims 18-19, 37-38 and 48-49 depend.
- 7. Therefore, the examiner respectfully maintains that Gill and the combination of Gill and Autry anticipate the subject invention.

8. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ting Zhou whose telephone number is (571) 272-4058. The examiner can normally be reached on Monday - Friday 8:30 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Cabeca can be reached at (571) 272-4048. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-4058.
